Data privacy does not have to be a roadblock

Instead, it can be an opportunity to increase patient trust, knowledge of internal systems and data collection, intelligent data analysis, and more. Over the past four years, our team has helped pharmaceutical, healthcare, and biotech companies overcome data privacy obstacles, answer pressing questions, and create and implement new roadmaps.

Søren Winkel, Partner

Pharma and healthcare focused Data Protection Officer (DPO) services

Appointing a Data Protection Officer (DPO) is a necessary component of most life science and healthcare companies' EU GDPR compliance strategies. This is because most of these companies process personal health data, such as health or genetic data, in clinical trials and other company processes – regardless of where the data is geographically processed.

By leveraging our highly experienced team of consultants, we can assist you with an external DPO whose sole responsibility is data protection and regulatory compliance.

Scalable regulatory-compliance through an external DPO

Ensuring thorough data privacy compliance does not have to be difficult, costly, or troublesome. By utilizing our external DPO service, your firm can take advantage of our years of expertise right away!

Our solution saves you money and time, and enables your company to scale protection efforts quickly in accordance with your needs.

With a scalable solution, your company can grow at the pace you set, while remaining certain that you stay compliant through all phases of development and product lifecycles.

Our DPO services include:

- **Advice on the principles of personal data processing**, rights of the data subject, responsibilities and obligations of controllers and processors, and third-country transfers.
- **Assistance with general risk management** and data protection impact assessments (DPIA).
- **Ensuring appropriate technical and organizational measures** to ensure the security of personal data
- **Guidance to ensure correct and sufficient safeguards** on data protection for the data to be processed by IT-Service vendors or transferred internationally.
- **Execution** of recurring awareness-raising, training and internal audits.
- **Cooperation with supervisory authorities** as a point of contact for authority inquiries
- **Monitoring of compliance with the EU/UK GDPR**, other global data privacy laws and national Data Protection Acts

Pharma IT is highly agile and has a customer-oriented approach

Our team is highly experienced and flexible, and our core approach is to spend as much time at our customers' sites as possible. In this way, we ensure that no question is left unanswered, no opportunity is missed - and most importantly: that our solution is specifically tailored to your company's needs.

Pharma IT's consultants are experts on international data privacy

Over the past four years, the Pharma IT team has helped companies of all sizes overcome data privacy obstacles, answer questions, and help turn data privacy into an opportunity for reflection and positive growth. To this end, our expertise spans all international laws pertaining to data privacy including: EU/UK GDPR, HIPAA, CCPA, PEPEDA, and ASEAN.

Our expertise is wide-ranging, and we can assist with everything from data protection to cooperation with supervisory authorities. Our data privacy services may, for example, consist of:

- Execution of gap analyses, review of processes and procedures, and preparing regulatory implementation roadmaps
- Mapping of personal data (preparing of record of processing activities)
- General risk assessment and preparing of data protection impact assessments (DPIA)
- Management of data processors through the assessment and preparation of Data Processing Agreements
- Processing of personal data breaches, including submissions and notifications
- Management of third-country transfers (i.e. SCCs, supplementary measures)
- Set up and maintenance of privacy management systems including documentation of business processes, preparing privacy policies, and consent forms
- Training and regulatory surveillance
- Mapping data flows in clinical trials or IT-Infrastructure
- Preparation and execution of internal/third-party audits
- Ensuring compliance with regulatory requirements

We can map your personal data and ensure compliant third-country data transfers

We are experts on personal data-mapping, gap-analyses, and finding the details that make all the difference in maintaining compliance. We notice the little things: Personal data stored in a place you would not expect, or an international data transfer in the middle of an otherwise compliant process. Furthermore, we make sure that you are compliant at all levels - from privacy policy statements to processing of personal data in daily operation.

We can assist with data privacy for Clinical Trials and during post-marketing surveillance

Pharma IT also has a dedicated team of highly experienced consultants within Clinical Trials & Science Operations. Together with our data privacy team, our combined skill-set allows us to assist customers in attaining thorough data privacy compliance according to the relevant requirements.

Get started with a gap-analysis of your compliance level

Pharma IT offers a fast and thorough gap analysis that lets you know your exact compliance level, as well as what can be done to increase it. If you are unsure about your current compliance level, let us know and we will get you up to speed.

Steen Lindebjerg, Principal Consultant

Meet our Customers

Pharma IT has more than 100 customers consisting of both small and large Biotech and Pharmaceutical companies. We value all types of assignments - from small projects to large enterprise solutions. Here's an excerpt of our customers:

Thank you for your interest in Pharma IT
